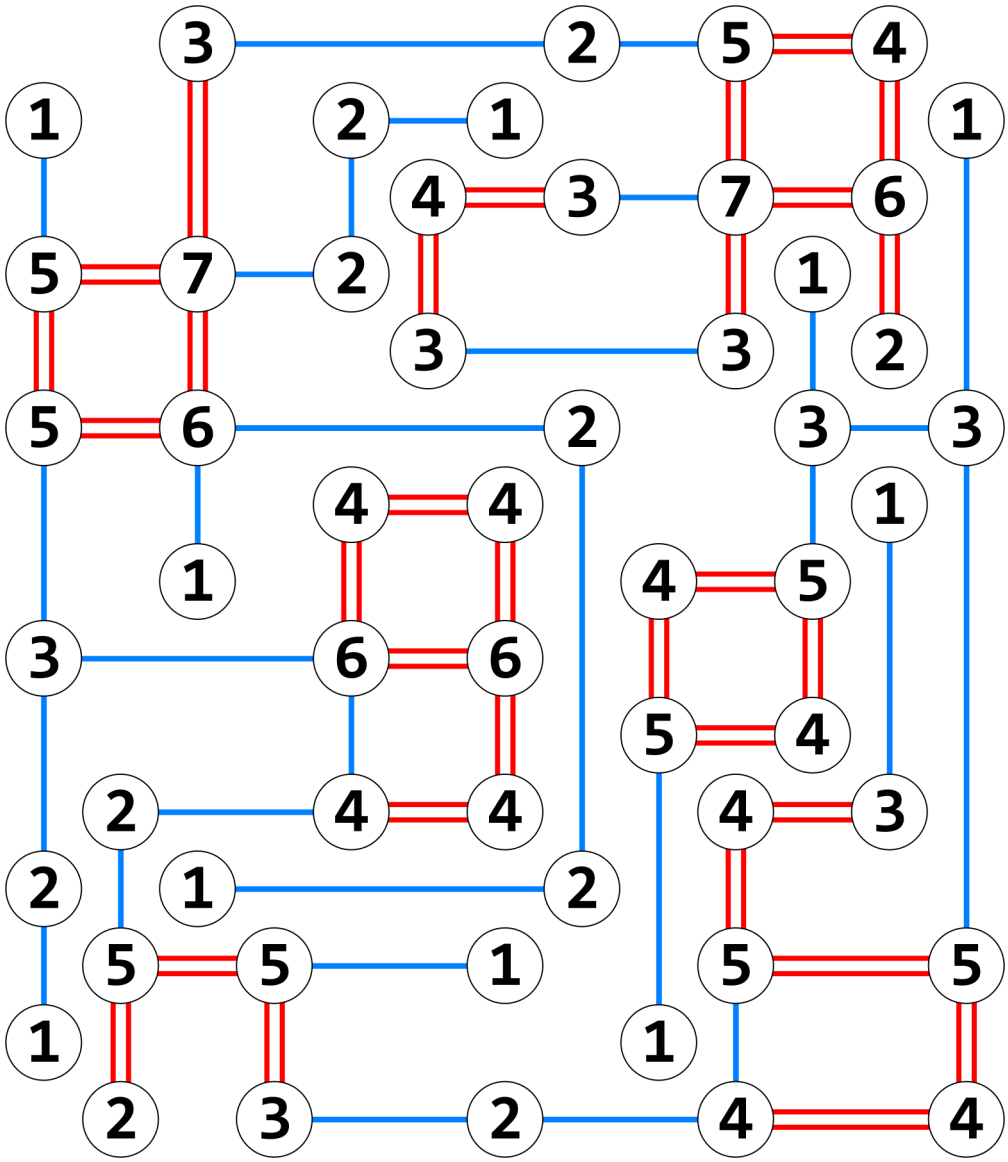
Indonesia 8

There are over 13,000 islands in the Republic of Indonesia.

Draw lines showing ferry routes between islands, then look at the most popular routes to discover what you might hope to see on a trip to Indonesia.

- Each island has a number that indicates how many lines will connect to it.
- Each line will connect two islands.
- Up to two lines may travel in parallel between a pair of islands.
- Lines may be drawn horizontally or vertically, but not diagonally.
- Lines may not cross each other.
- All islands must be connected, i.e. you must be able to get from any island to any other island.



Answer: DRAGONS **(for the Komodo dragons that are found in Indonesia)**
