

## GHOST in the Machine

---

### Background

The Special Service Intelligence agency is in chaos. Someone has hacked into our system and gained access to the classified files for our agency's elite spy program. Some of the files have been corrupted, and sensitive information may have been stolen. It appears that this might be the work of the shadow state **GHOST**: the **G**lobal **H**eadquarters for **O**utcasts, **S**ociopaths, and **T**hugs.

### Critical Intel

Control has come to the cyber unit to ask you, 008, and your colleagues to uncover the identity of the hacker. Since hackers like to sign their work for notoriety, you suspect the hacker's name will be hidden within the corrupted files. You believe the signature is embedded in the fragment of data shown below.

The hacker corrupted the files containing the dossiers of well-known agents in the elite spy program. You are able to recover some coherent phrases describing the agents' activities and profiles, but it is no longer apparent which observation goes with each subject. Understanding the behaviors of these famous agents may provide information to help you target the relevant parts of the hacker's data.

### Your Mission

Confer with your fellow teams to correlate the dossier data and use that to assist you in discovering the hacker's code name.
